About Qatar Airways Cargo

Qatar Airways Cargo serves 60 dedicated freighter destinations around the world, via our hub in Doha. We deliver cargo to over 150 key destinations globally on 200 aircraft.

Cargo handled includes automobiles, pharmaceuticals, perishables, valuables, live animals, dangerous goods, oversized cargo and general cargo that require air freight carriage.

The freighter fleet currently includes eight Airbus A330F and twelve Boeing 777 freighters.

Qatar Airways' cargo network provides a global reach for customers in Africa, Europe, North America, South America, the Middle East, South Asia, South East Asia, North East Asia and Australia.

The art of pharmaceutical transportation

The research, testing, production and movement of pharmaceutical products, such as medicine, lifesaving drugs or vaccines, make Life Science products one of the most regulated, expensive, and fragile cargo to handle. Our customers rely heavily on meticulous and uncompromised service standards to ensure that the integrity of time and temperature-sensitive pharmaceuticals is consistently maintained. With a thorough understanding of the intricacy of pharmaceutical transportation, Qatar Airways Cargo offers a well-designed service that provides optimal conditions for pharmaceutical shipments across the world.

Our sophisticated technology and qualified staff enable us to ensure efficiency and compliance in the handling of temperature-sensitive pharmaceutical products. We have pioneered industry leading "Pharma Express" flights direct from the heart of the pharmaceutical production areas, feeding our hub in Doha where our new fleet of climate-controlled vehicles eliminate temperature variations and provide a rapid seamless transfer.

A cool environment for the entire journey

Active temperature controlled containers are specially designed to maintain a constant temperature during the entire transportation chain; creating the ideal environment for transporting pharmaceutical products.

Active

We offer a choice of Envirotainer, C-Safe, DoKaSch, VA-Q-TEC Units that maintain a precise temperature from -20°C to $+25^{\circ}\text{C}$. They are designed to provide a constant temperature throughout the entire transfer.

Passive

For full container loads of passively-packed shipments, we provide temperature-controlled storage either at $+2^{\circ}\text{C}$ to $+8^{\circ}\text{C}$ or $+15^{\circ}\text{C}$ to $+25^{\circ}\text{C}$ in monitored container cells allowing us to cater to specific customer requests and demanding shipment requirements.

Absolute peace of mind from point of origin to destination

With Qatar Airways Cargo, you can be assured of comprehensive care and optimal conditions as your pharmaceutical cargo travels the globe. We've heavily invested in sophisticated technology and qualified staff to ensure superb efficiency and compliance from point A to B.

Prior to departure

Airside temperature-controlled areas offer precise temperature management for your shipment prior to aircraft departure.

Transportation and transfers

The 'Quick Ramp Transfer' (QRT) is the fastest airline transfer at Doha. The use of climate-controlled vehicles eliminates temperature exposure risk and guarantees an absolute temperature-controlled transfer process.

Cargo movement

To ensure that your shipment is safely transported on board, an airside team will actively manage cargo movement from the airside temperature-controlled rooms to the aircraft.

The highest standard of excellence

The Doha Cargo hub operates in accordance with the highest Pharmaceutical Industry Standards. Compliant with 'Good Distribution Practice' (GDP), it ensures shipments are consistently stored, transported and handled under suitable conditions as required by the product specification.

Journey milestones

A dedicated Climate Control Team will monitor your shipment from acceptance to delivery. They will track all the milestones in the transfer and provide you with progress updates. They will also proactively anticipate and resolve any potential issues.

- Climate-controlled handling with more than 220 pallet positions
- Climate-controlled environment during ramp transportation and aircraft-to-aircraft transfers in Doha
- Real-time tracking of order status and shipments

State-of-the-art cargo terminal at Hamad International Airport

Our brand new cargo terminal at Hamad International Airport offers state-of-the-art technology and world-class service to customers across the globe. Built to handle 1.4 million tonnes of cargo annually our cargo terminal is one of the largest in the world. It provides an air cargo handling system capable of accommodating 1,005 Unit Load Devices (ULD) and 5,000 consignment cages.

Our high-tech Cargo Warehouse Information System (CWIS) can pinpoint the location of every cargo in the terminal with precise accuracy. This means that each cargo can be tracked and processed quickly and efficiently, whether it's stored in the ULD System, consignment cages or in any of the various special cargo handling areas. The entire facility is climate-controlled, and we have also made provisions for the recharging of the latest technology electrical active containers in a separate handling area.

High, round-the-clock security measures and individual security cards to official cargo staff ensures restricted access and offers customers peace of mind.

HIA Cargo terminal features

- Cargo capacity: 1.4 million tonnes per year
- Aircraft parking facilities: Up to 11 code F Freighters
- ULD capacity: 1005 main deck units
- Cargo complex area: 292,000 sq m
- Cargo terminal building: 55,000 sq m
- Airside Climate Control Centre 2470 sqm
- 220 temperature-controlled positions for units requiring refrigeration
- Cargo agent building: 5,000 sq m
